

BSc in Computer Science

Mandatory Courses

<i>Title of Course Unit</i>	Introduction to informatics
<i>Code</i>	NBT_IM740K2, NBT_IM741G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2+2 (lectures +seminars)/60
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	2 + 2
<i>Language</i>	English
<i>Mandatory/Elective</i>	Mandatory
<i>Contact Person</i>	Emőd Kovács (Responsible for Course: Emőd Kovács)
<i>Course Description</i>	<p>Attributes of information, its transmission. Coding and decoding. Analogous and digital systems. Numerical systems, conversion rules. Main concepts of informatics, the digital computer as an information processing machine. Information representation on computer: bit, byte and their orders of magnitude; pointer, logic, textual and numerical data representations and their operations; code representation. Programming methods.</p> <p>Computer programming. Main concepts of machine code. Assembly and higher level programming languages.</p> <p>Computer architectures. Hardware, software: central processing unit, peripheral devices, storage devices. Operating systems. Developmental softwares, compilers, interpreters, syntax, semantics, programming languages.</p>

	Common applications: word processing, presentations, spreadsheets, database management. Network basics. Using the Internet.
<i>Readings</i>	<ul style="list-style-type: none"> • H. H. Goldstine: A számítógép Pascaltól Neumannig. Műszaki Könyvkiadó, Budapest, 2003. • Csala P. - Csetényi A. - Tarlós B.: Informatika alapjai. Computerbooks, Budapest, 2001. • Andrew S. Tanenbaum: Számítógép architektúrák. Panem Könyvkiadó, Budapest 2001. • L. Snyder: Fluency with Information Technology: Skills, Concepts, and Capabilities
<i>Assessment</i>	Seminars: two written tests Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	High-level programming languages 1
<i>Code</i>	NBT_IM812K3, NBT_IM813G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2+2 (lectures +seminars)/60
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	3 + 2
<i>Language</i>	English

<i>Mandatory/Elective</i>	Mandatory
<i>Contact Person</i>	Gergely Kovásznai (Responsible for Course: Gergely Kovásznai)
<i>Course Description</i>	Evolution of high-level programming languages. Classification of programming languages: imperative (procedural and object-oriented), declarative (functional and logic), and special languages. The use of a compiler, an interpreter and a virtual machine. Variables and constants. Data types (primitive and compound ones). Declarations. Literals, operators, expressions. Assignment statements. Conditional statements, multiple selections. Iteration statements, pre-test and post-test loops, the for-loop. Statement blocks. Scope and lifetime. Arrays (one-dimensional and multidimensional). List, stack and queue. Reference type, class and record, enumeration type. Methods (procedures and functions). Passing parameters, types of parameters. Input and output, dealing with files. The aim is to get acquainted with a procedural programming language.
<i>Readings</i>	<ul style="list-style-type: none"> ● Neil Smyth: C# Essentials. Payload Media, 2012. ● C Sharp Programming. Wikibooks.org, 2013. ● Bruce Eckel: Thinking in Java. Prentice Hall, 2006. ● Robert W. Sebesta: Concepts of Programming Languages. Addison-Wesley, 2012.
<i>Assessment</i>	Seminars: two written tests Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Automata and Formal Languages
-----------------------------	--------------------------------------

<i>Code</i>	NBT_PI110K3
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	3
<i>Language</i>	English
<i>Mandatory/Elective</i>	mandatory
<i>Contact Person</i>	Roland Király (Responsible for Course: Roland Király)
<i>Course Description</i>	Main types of formal systems and automata. Languages, grammars and normal forms. Relations between languages and automata. Chomsky's language classification. Operations with languages and language algebra. Analysers and interpreters. Grammatical algorithms. How formal languages are linked to translational algorithms. The use of Chomsky's languages in IT. Lexers, parsers and syntax checking algorithms.
<i>Readings</i>	<ul style="list-style-type: none"> ● John E. Hopcroft, Rajeev Motwani, Jeffrey D. Ullman: Introduction to Automata Theory, Languages, and Computation, 3/E, Prentice Hall 2006. ● Király Roland: Formal languages and automata TAMOP jegyzet TÁMOP-412/08/1/A-2009-0046 http://aries.ektf.hu/~hz/pdf-tamop/index.html

<i>Assessment</i>	Lecture: end-of-term oral exam.
-------------------	---------------------------------

<i>Title of Course Unit</i>	Logical foundations of Computer Science
<i>Code</i>	NBT_PI111K3, NBT_PI112G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 + 2 (lectures and seminars)/60
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	3 + 2
<i>Language</i>	English
<i>Mandatory/Elective</i>	mandatory
<i>Contact Person</i>	Gábor Kusper (Responsible for Course: Gábor Kusper)
<i>Course Description</i>	This course covers two logics: propositional logic and predicate logic. It covers their syntax and semantics. We introduce the following notions: atomic formula, logical connectives, well-formed formula, interpretation of a formula, tautology, contradiction, satisfiable formula, literal, clause, conjunctive normal form (CNF), disjunctive normal form (DNF). We show how to transform any formula into CNF or DNF. In case of predicate logic we introduce the

	<p>following notions: term, constant, variable, function symbol, predicate symbol, atomic formula, logic connectives, for-all quantifier, exists quantifier, well-formed formula, interpretation of a formula. We show how to prove the validity of a formula by Sequent calculus.</p>
<i>Readings</i>	<ul style="list-style-type: none"> • Logic for Computer Science, http://en.wikibooks.org/wiki/Logic_for_Computer_Science, Publisher: Wikibooks 2010. • Uli Furbach: Logic for Computer Scientists, http://en.wikibooks.org/wiki/Logic_for_Computer_Scientists, Publisher: Wikibooks 2010.
<i>Assessment</i>	<p>Seminars: two written tests</p> <p>Lecture: end-of-term oral exam.</p>

<i>Title of Course Unit</i>	Calculus I
<i>Code</i>	NBT_PI132K2, NBT_PI133G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 + 2 (lectures and seminars)/60
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	2 + 2

<i>Language</i>	English
<i>Mandatory/Elective</i>	mandatory
<i>Contact Person</i>	Zay Béla (Responsible for Course: Zita Czapné Makó)
<i>Course Description</i>	Real sequences. Special limits, number e. Operations on convergent sequences. Monotonic and bounded sequences. Infinite sequences. Limit of a function, some important limits. Continuity. Differentiation: rules, derivatives of elementary functions. Mean value theorems, L'Hospital's rule, Taylor theorem. Curve sketching for a function, local and absolute extrema.
<i>Readings</i>	<ul style="list-style-type: none"> ● Sterling K. Berberian: A First Course in Real Analysis, 1994 ● Howard Anton: Calculus 1989.
<i>Assessment</i>	Seminars: two written tests Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Computer Architectures
<i>Code</i>	NBT_PI157K3
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester

<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	3
<i>Language</i>	English
<i>Mandatory/Elective</i>	mandatory
<i>Contact Person</i>	Péter Keresztes (Responsible for Course: Péter Keresztes)
<i>Course Description</i>	<p>Computer generations. The internal structure of computers: storage, controller, processor, I / O system, channel, concept and system of bus parts. General microprocessor architecture model. Logical operations, values, logical functions.</p> <p>Graphic minimization, Karnaugh Veitch-. Simple combination of logical networks: multiplexer, demultiplexer, encoders, decoders, code converters, cooperative units, parity creators and parity check units, adders. Risk of logic circuits. Elementary sequential networks: RS flip-flop, JK flip-flops, T flip-flop, flip-flop multi-vibrator, registers. Synchronous and asynchronous counters. Semiconductor memories: classification, working principle. Classification of machine-level instructions and execution, memory and I / O cycles. Execution of machine level control commands.</p> <p>Processor controlled and independent server operating condition. The computer I / O system. AD and DA converters, serial and parallel interfaces. Character and graphic visualization. Peripherals: keyboard, mouse, scanners, printers. Storages: magnetic disk, magnetic tape, optical storage devices. Classification of computers: SISD, SEMD, MED, MIMD, RISC, CISC machines. The structure and operation of transputer, machine-level instructions. Classification of the use of computers, parallel events, a parallel processor systems, parallel processing mechanisms. Parallel computer structures: pipeline computers, array processors,</p>

	<p>multiprocessor systems, execution of instructions. The structure and function of stream computers. I/O subsystems of multiprocessor systems: classification of interrupts. Skalar and vector processors. Vectorized processing features. SIMD array processors: the concept of connection network, data tuning mechanisms, topology of connection networks. Associative memory, associative array processing, associative processors.</p>
<i>Readings</i>	<ul style="list-style-type: none"> ● P. Theisz, G. Gunber, L. Jagudits, Digitális technika I., BME ● Patterson D.A., Henessy J.L.: Computer organization & Design, Morgan Kaufmann Publ. (2 ed.) 1998. ● Rob Williams: Computer System Architecture (A Networking Approach), Addison Wesley, 2001.
<i>Assessment</i>	Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Introduction to HTML
<i>Code</i>	NBT_PI163K3
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English

<i>ECTS Credits</i>	3
<i>Language</i>	English
<i>Mandatory/Elective</i>	mandatory
<i>Contact Person</i>	Péter Szigetváry
<i>Course Description</i>	<p>HTML5, syntax of tags and attributes. Writing standards-compliant and valid HTML pages. A comprehensive list and detailed usage patterns of elements in the following categories: sectioning, grouping, text-level, table, form, interactive and embedded.</p> <p>CSS syntax, fields of usage. Selectors, using CSS rules, specificity. Formatting and positioning of HTML elements and structures. CSS1/CSS2.1 extended with the CSS3 modules and attributes that are already implemented and commonly (browser independently) usable.</p>
<i>Readings</i>	<ul style="list-style-type: none"> ● http://www.w3.org/TR/html5/ ● https://developers.whatwg.org/ ● http://www.w3.org/TR/CSS21/ ● http://www.w3.org/TR/CSS/#css3 ● http://www.webplatform.org/
<i>Assessment</i>	Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Data structures and algorithms
<i>Code</i>	NBT_IM711K3, NBT_IM712G2

<i>Department</i>	Department of Information Technology
<i>Semester</i>	Summer semester
<i>Contact Hours Weekly/Total</i>	2+2 (lectures +seminars)/60
<i>Prerequisites</i>	Good command of English and NBT_IM740K2 or any equivalent course.
<i>ECTS Credits</i>	3 + 2
<i>Language</i>	English
<i>Mandatory/Elective</i>	Mandatory
<i>Contact Person</i>	Gábor Geda (Responsible for Course: Gábor Geda)
<i>Course Description</i>	Steps of task resolution on a computer. Main concepts: principle of algorithm, structural units, attributes, data, data types. Algorithm describing tools. Classification of basic algorithms, implementations with describing tools and in an actual programming language. Theorems of summation, selection, decision, picking; searching (linear and logarithmic search) and sorting (direct, selection, bubble, insertion, shell, quicksort) algorithms. Basic concepts of algorithm efficiency. Principles of data types, their classification. Operations on data types (create, insert, delete, swap, sort, search, access, iterating , processing). Representation of data structures (continuous and distributed). Implementing data structures. Using data structures.
<i>Readings</i>	<ul style="list-style-type: none"> • T. H. Cormen, C. E. Leiserson, R. L. Rivest, C. Stein: Új algoritmusok. Scolar, 2003. • D. E. Knuth: A számítógépprogramozás művészete, 1. Kötet, Műszaki Könyvkiadó, 1988. • D. E. Knuth: A számítógépprogramozás művészete, 3. Kötet, Műszaki Könyvkiadó, 1990. • Bognár K.: Adatszerkezetek és algoritmusok. Egyetemi jegyzet. Debrecen, 1998.

<i>Course Description</i>	AI researches, methods and achievements. Representing problems in state space, examples. Graph representation. Classification and setup of search systems. Not modifiable strategies. Backtrack algorithm. Graph search methods: breadth-first, depth-first, optimal searches. Heuristic graph searches: best-first and the A algorithm. Wholeness of the A algorithm. Problem reductive approach, represented with AND/OR graph. Solution in AND/OR graphs. Search strategies in an AND/OR graph: breadth, depth, AO algorithm. Listening for termination with labels. Fully described two player games, their representation with game trees. Existence of winning strategy. Minimax theorem, alpha-beta pruning. Basics of logic programming.

<i>Contact Person</i>	Gábor Kuser (Responsible for Course: Gábor Kuser)
<i>Course Description</i>	This course covers the following topics: object oriented design (OOD), design patterns, and best practices in software development. In the field of OOD we learn the following principles: Program to an interface, not an implementation (GOF1), Favor object composition over class inheritance (GOF2), Single Responsibility Principle (SRP), Open-Closed Principle (OCP), Liskov Substitutional Principle (LSP), Dependency Inversion Principle (DIP), and Hollywood Principle. In case of design patterns we learn the most basic patterns from the Gang-of-four book, like Strategy, Template Method, Observer, Factory Method, Singleton, Proxy, Decorator, Command. In case of best practices we learn about clean code and test driven development.
<i>Readings</i>	<ul style="list-style-type: none"> ● Erich Gamma, Richard Helm, Ralph Johnson, John Vlissides: Design Patterns: Elements of Reusable Object-Oriented Software, 1995. ● Robert C. Martin: Clean Code, A Handbook of Agile Software Craftsmanship, 2008. ● Robert C. Martin, Micah Martin: Agile Principles, Patterns, and Practices in C#, July 30, 2006.

<p><i>Course Description</i></p>	<p>Objectives: During the course, students will learn about the general characteristics of the authoring systems used in the multimedia development and the usage of a particular system named NeoBook 5. The course is intended to provide a general overview of the features of authoring systems, as well as demonstrating the possibilities of application development by using a specific authoring system.</p> <p>The curriculum</p> <p>Types and characteristics of multimedia authoring systems. The characteristics of frame-based systems. An overview of the userinterface of NeoBook 5 Creating the first presentation. Properties lists, inserting and renaming. The Push button and the use of the Image and Scrolling article controllers. Introductions to the NeoBook programming basics. Using the command editor. Goto ... commands. Variables, branches and cycles in NeoBook. Managing arrays, reading lines of text files with NeoBook commands. Using the built-in text editor of NeoBook. Characteristics of RTF files and their roles in multimedia authoring systems. Using List fields and Combo boxes. Using Radio buttons and selection boxes. Creation and evaluation of closed-end test. Use of TrackBar, Web browser, flash movie and animated gif. Container and Polygon tools. Creation of own menu and toolbar in presentations. The built-in predefined variables of NeoBook Advanced multimedia presentation design and the steps of the implementation. Application development by using NeoBook. The NeoBook limitations.</p>

<i>Assessment</i>	Seminars: two written tests Lecture: end-of-term oral exam.
-------------------	--

<i>Title of Course Unit</i>	Cryptography
<i>Code</i>	NBT_IM806K3
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	Tibor Radványi (Responsible for Course: Kálmán Liptai)
<i>Course Description</i>	Basic concepts of cryptography. Symmetric, asymmetric cryptosystems. Offset, linear system, DES, RSA, ECC, AES. Basic cryptographic protocols. Digital signature. Presentation of PGP.

<i>Readings</i>	<ul style="list-style-type: none"> ● H. J. Menezes, P. C. Kis van Oorschot, S. A. Vanstone: Handbook of applied cryptography, CRC Press, 1997. ● Christof Paar , Jan Pelzl, Bart Preneel: Understanding Cryptography: A Textbook for Students and Practitioners ● Jonathan Katz, Yehuda Lindell: Introduction to Modern Cryptography: Principles and Protocols
<i>Assessment</i>	Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Computer Algebra Systems
<i>Code</i>	NBT_IM800G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (seminars)/30
<i>Prerequisites</i>	Good command of English, and NBT_GN100K2 or equivalent course
<i>ECTS Credits</i>	2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	Tibor Juhász (Responsible for Course: Kálmán Liptai)

<i>Course Description</i>	Historical review. Algorithms for algebraic and number theoretic problems. Introduction to some Computer Algebra Systems (e.g. GeoGebra, Maple, Mathematica). Programming of Computer Algebra Systems.
<i>Readings</i>	<ul style="list-style-type: none"> ● Maple manual: http://www.maplesoft.com/documentation_center/ ● GeoGebra manual: http://wiki.geogebra.org/en/Manual ● André Heck: Introduction to Maple, Springer-Verlag, 2003 ● Geddes-Czapor-Labahn: Algorithms for Computer Algebra, Kluwer Academic, 1992
<i>Assessment</i>	Seminars: two written tests

<i>Title of Course Unit</i>	Interactive Information Systems
<i>Code</i>	NBT_PI169K2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English, and NBT_PI110K3, NMT_IM812K3 or equivalent courses

<i>ECTS Credits</i>	2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	István Fazekas (Responsible for Course: Gergely Kovásznai)
<i>Course Description</i>	
<i>Readings</i>	•
<i>Assessment</i>	Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Foundations of Robotics
<i>Code</i>	NBT_PI172K2, NBT_PI171G2
<i>Department</i>	Department of Information Technology

<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 + 2 (lectures + seminars)/60
<i>Prerequisites</i>	Good command of English, and NBT_PI100K3 or equivalent course
<i>ECTS Credits</i>	2 + 2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	Gábor Geda (Responsible for Course: Gábor Geda)
<i>Course Description</i>	
<i>Readings</i>	<ul style="list-style-type: none"> •
<i>Assessment</i>	<p>Seminars: two written tests</p> <p>Lecture: end-of-term oral exam.</p>

<i>Title of Course Unit</i>	Artificial Neural Networks
<i>Code</i>	NBT_PI144K2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (lectures)/30
<i>Prerequisites</i>	Good command of English, and NBT_PI100K3 or equivalent course
<i>ECTS Credits</i>	2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	Tibor Tajti (Responsible for Course: Miklós Hoffmann)
<i>Course Description</i>	Problem solving, learning. Human brain. A model of human brain. The idea of artificial neural network. Typical applications. Perceptron, multilayer perceptron. Feedforward neural network. Recurrent neural network. Supervised learning. Unsupervised learning. Design and development steps of error backpropagation algorithm. Design and development steps of self-organizing map. Performance questions.
<i>Readings</i>	<ul style="list-style-type: none"> ● Raúl Rojas: Neural Networks – A systematic introduction ● Simon Haykin: Neural Networks - A Comprehensive Foundation ● LeCun, Bottou, Orr, Müller: Efficient Backprop

<i>Assessment</i>	Lecture: end-of-term oral exam.

<i>Title of Course Unit</i>	Digital Image Processing
<i>Code</i>	NBT_PI114G2
<i>Department</i>	Department of Information Technology
<i>Semester</i>	Winter semester
<i>Contact Hours Weekly/Total</i>	2 (seminars)/50
<i>Prerequisites</i>	Good command of English
<i>ECTS Credits</i>	2
<i>Language</i>	English
<i>Mandatory/Elective</i>	elective
<i>Contact Person</i>	Sándor Király
<i>Course Description</i>	Model of the human vision. Digitalization. Histogram-transformation: scratching, balancing, thresholding. The convolution and its applications: average filters, rank filters, smooth, edge detections, sharpening. Integral transformations: Fourier-transform, Wavelet-transform, and DCT. Transform applications. Morphology: dilation, erosion, opening, closing, Hit-Miss transformation, outline retrieval, gap filling, and related components searching, convex hull, thinning, skeleton, removing outgrowth. Segmentation: tresholding, region based segmentation, textures, Canny edge detector. Digital image formats.

<i>Readings</i>	<ul style="list-style-type: none">● R. G. Gonzales, R. E. Woods: Digital Image Processing. Prectice Hall, 2008. ISBN number 9780131687288● Wavelets and Filter Banks by Gilbert Strang and Truong Nguyen, Wellesley-Cambridge Press, 1997.● Maria Petrou, Costas Petrou: Image Processing: The Fundamentals, Wiley, 2010, ISBN-13: 978-0470745861
<i>Assessment</i>	Seminars: two practical tests
